# What is creditworthiness rating?

Creditworthiness rating is above-average rating value of entities - economic operators. It is based on the entities' financial statements for the last business year and forecasts the safety of operations in the next twelve months.

Companies with creditworthiness rating achieve above-average results and meet the criteria for reduced probability that they would experience any of the following events in the next twelve months:

- bankruptcy, compulsory settlement or liquidation (< 0.08% probability),
- deletion of entity from the companies register (< 0.81% probability),
- blocking of the entity's transaction accounts for more than 60 days without interruption or more than 90 days with interruption (< 0.41% probability).

Companies awarded the AAA Credit Rating Excellence, mostly:

1. Have been in business for at least 8 years.
2. Their total annual revenues exceed EUR 80,000.
3. Their equity amounts to at least EUR 30,000.
4. The debt/asset ratio mostly does not exceed 65%.

**There is a 98% probability that entities with AAA creditworthiness rating will maintain the creditworthiness rating also in the next year**

Certification has become an established practice in the international environment and a method for entities to further consolidate their reputation and trust in domestic and foreign business environment. The holders of a certificate thus gain additional trust of their business partners.

The Bisnode Group has a long-term tradition in granting certificates of rating excellence in the following 12 European countries: Sweden, Norway, Finland, Denmark, Germany, Slovenia, Croatia, Serbia, Bosnia and Herzegovina, Poland, Czech Republic and Hungary. In the next years, certification will be carried out at the level of the entire group of 18 European countries in which Bisnode operates.

# Graphic analysis

## Participation rate of liabilities

The participation rate of liabilities tells us the amount of assets financed by foreign capital. The higher the ratio, the better the company uses foreign sources for its financing (current and non-current liabilities). As a rule, foreign financing is cheaper than financing from own resources.

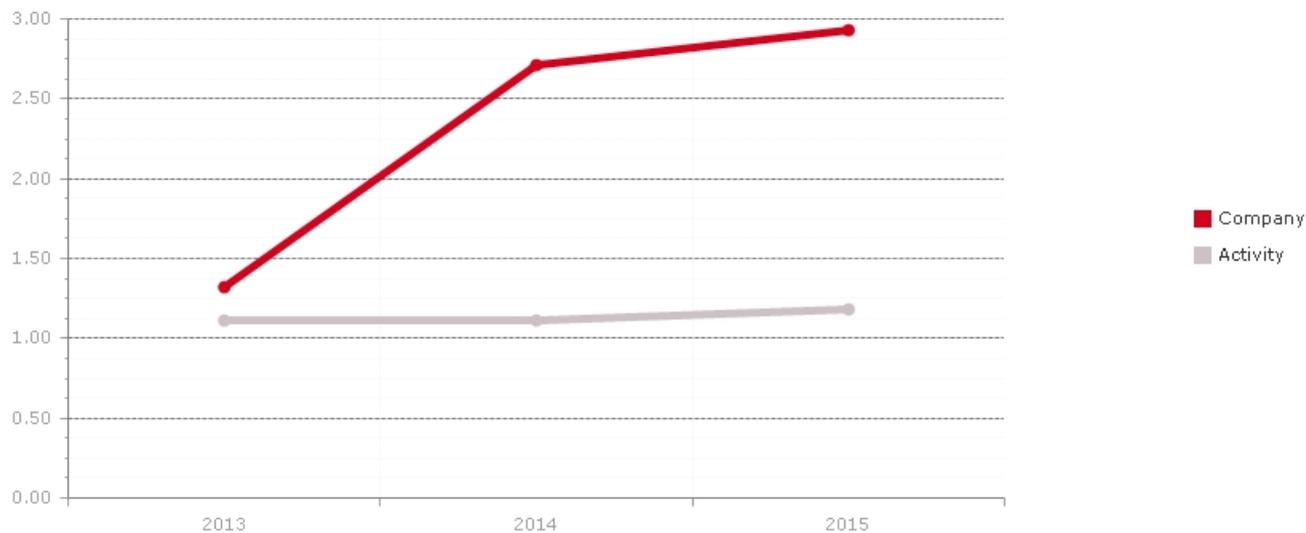

### Calculation ratios

$$\text{Participation rate of liabilities} = \frac{\text{Financial and operating liabilities}}{\text{Liabilities}} \times 100$$

**AAA**

**Creditworthiness Rating**

# Liquidity ratio

The liquidity ratio tells us the the coverage of current liabilities by current assets. The higher the value of the ratio, the easier it is for the company to settle its current liabilities. Liquidity is the company's ability to have at its disposal, within a short period of time, adequate liquid assets for timely payment of due liabilities.

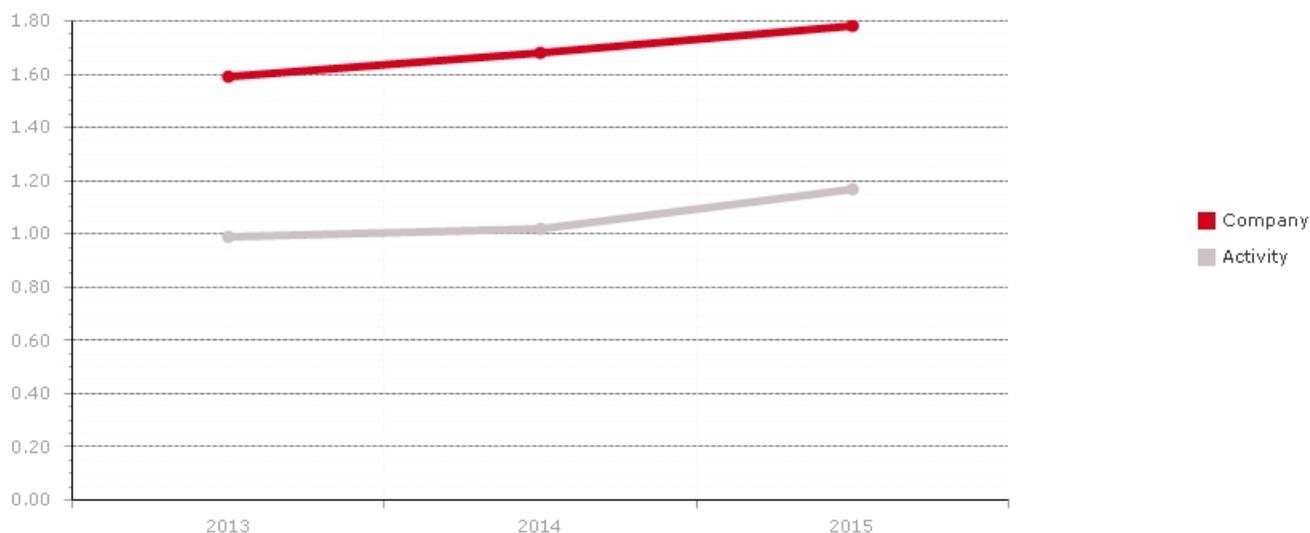

## Calculation ratios

$$\text{Liquidity ratio (Quick ratio)} = \frac{\text{Current assets}}{\text{Current liabilities}}$$

**AAA**

**Creditworthiness Rating**

## Assets turnover ratio

The ratio measures the share of total revenues in assets and tells us the amount of total revenues generated by the company with the available assets. The higher the value of the ratio, the better the performance of the company and the shorter its turnover. The shorter the turnover, the better the liquidity of the company and the smaller the probability that it would experience liquidity problems. A shorter turnover means that assets require less time to be converted from non-liquid to liquid state.

### Calculation ratios

$$\text{Assets turnover ratio} = \frac{\text{Total revenues (Sales)}}{(\text{Assets last year} + \text{Assets previous year}) / 2}$$

**AAA**

**Creditworthiness Rating**

# Methodology

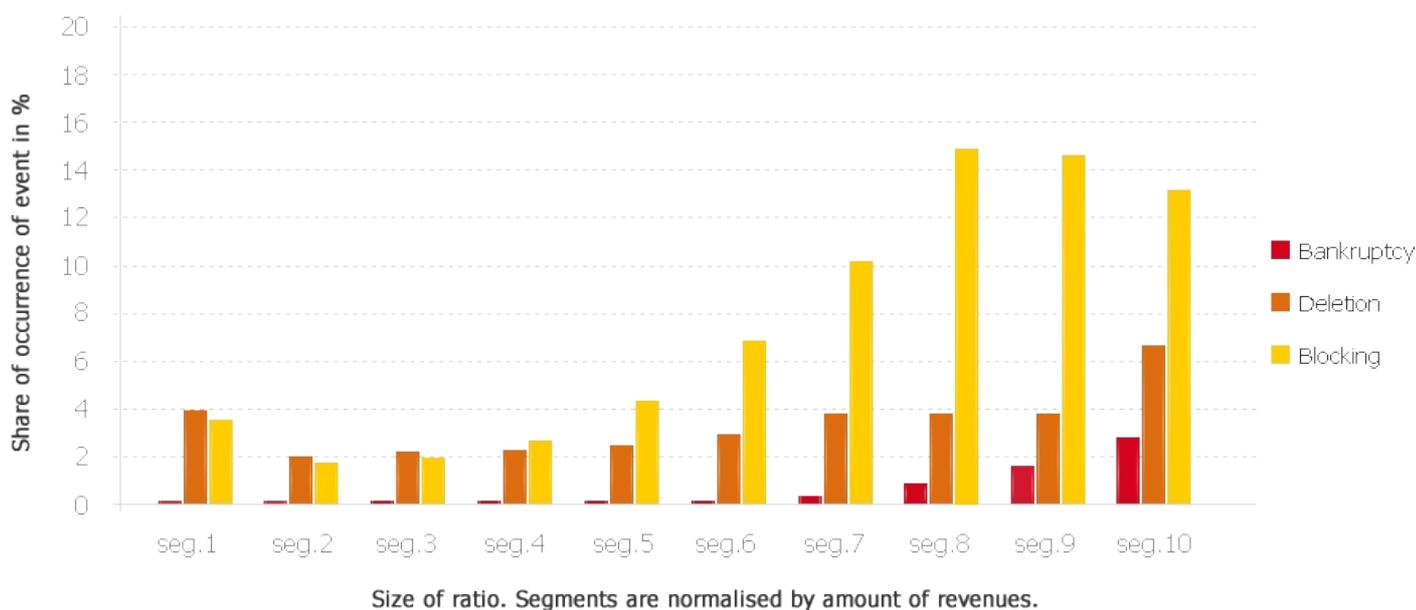

The methodology for assessing creditworthiness rating is based on statistical models which forecast the probability of bankruptcy, deletion and blocking in the next twelve months of the entity's business operations.

The statistical models were based on the financial ratios of entity operations (indebtedness, liquidity, performance and efficiency) in the last three years and on the basis of negative events (bankruptcy, deletion, blocking) in the selected period.

In order to achieve a more adequate comparison of the values obtained between the entities, the financial ratios were normalised on the basis of the size of assets or total revenues.

The results of statistical analyses have shown that entities with relatively lower share of debt in financing are less likely to face bankruptcy, deletion or long-term blocking of transaction accounts in the next 12 months.

### Participation rate of liabilities

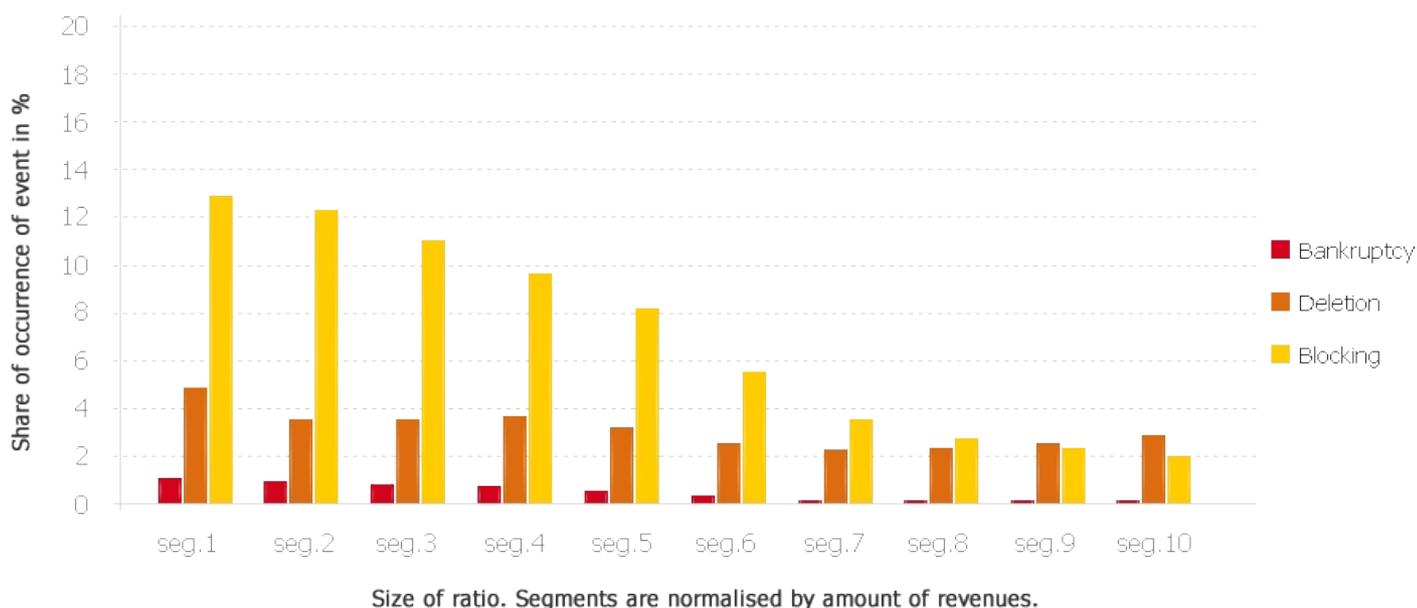

**AAA**

**Creditworthiness Rating**

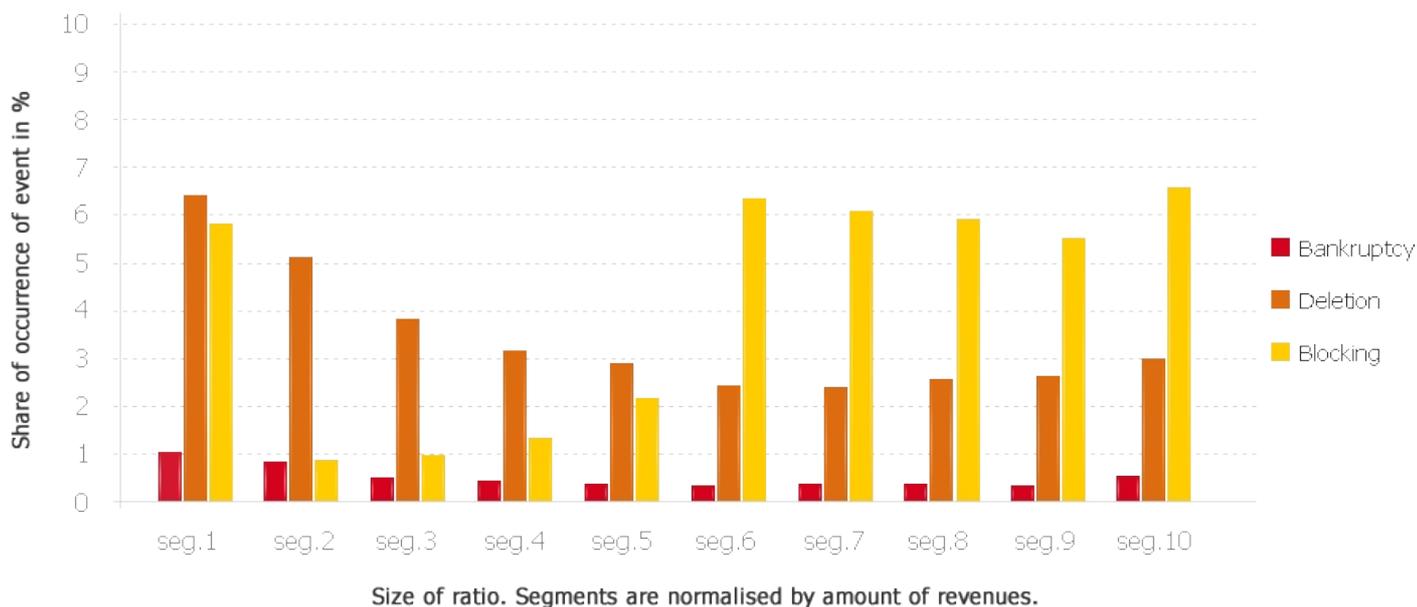

Entities with a higher liquidity ratio are also less risky.

### Liquidity ratio

There is lower risk of bankruptcy and deletion in entities recording a higher assets turnover ratio.

### Assets turnover ratio

**AAA**

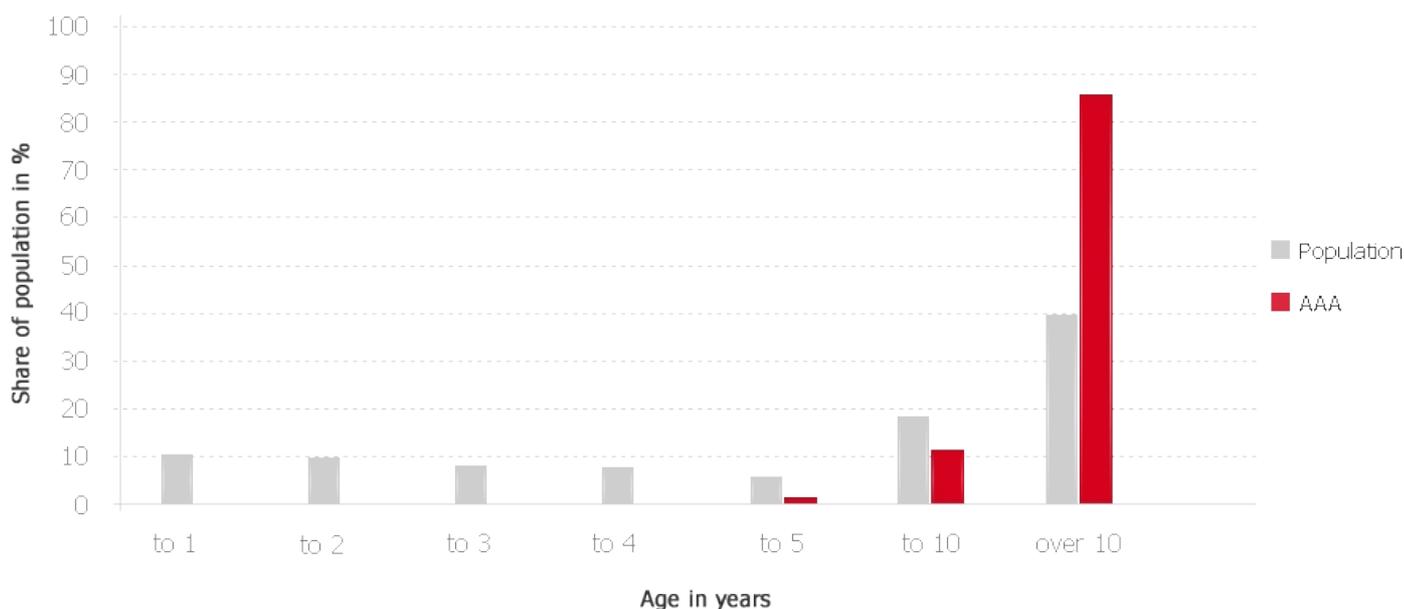

**Creditworthiness Rating**

# Statistics

In our analysis, we compared the entities with the AAA creditworthiness rating and the total population of economic operators: companies, sole proprietors and cooperatives.

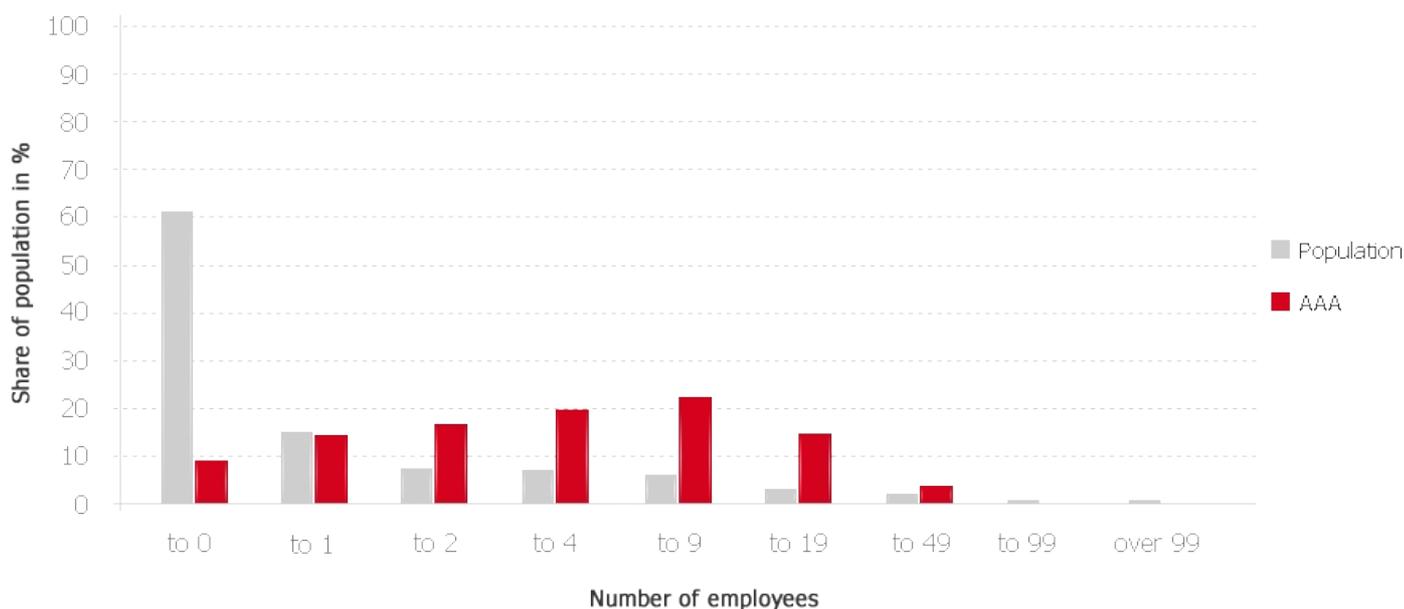

The comparison of populations by age of entities shows that AAA creditworthiness rating is achieved by older companies.

### Distribution by age

The comparison of entities by number of employees shows that those with 0 to 49 employees are more likely to achieve AAA creditworthiness rating.

### Distribution by number of employees

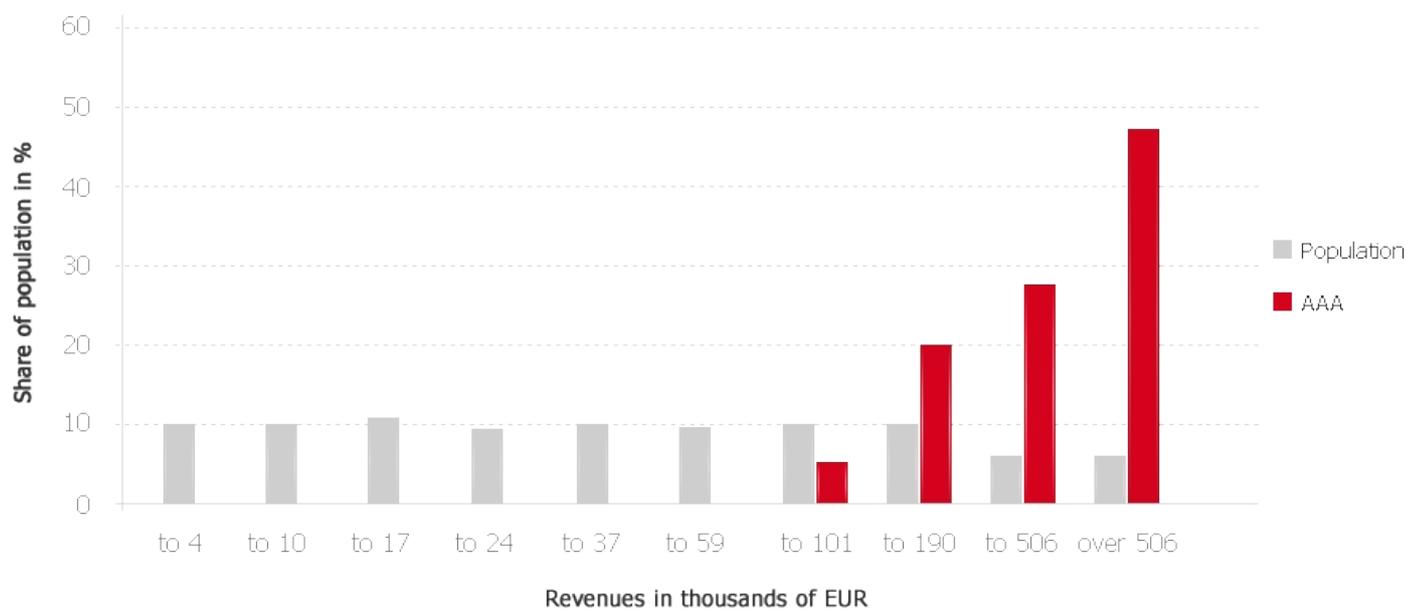

**AAA**

**Creditworthiness Rating**

The overview of the distribution of populations in terms of the size of total revenues reveals that entities with annual revenues above EUR 59.000 prevail in the population with AAA creditworthiness rating.

### Distribution by total revenues
